RCSpeedo Android Application Privacy Policy

RCSpeedo makes use of several sensor on your phone to perform its speed detection functionality. The data from these sensors is in no way recorded, stored or transmitted over the Internet. RCSpeedo does not use your phone's Internet connection unless you are sharing log files or when it authenticates itself on first start-up in the case of the promotional version of the app.

The following permissions are used by RCSpeedo for the listed reasons:

Microphone	Audio is recorded in a temporary buffer for signal analysis. This signal analysis provides the main functionality of the app.
GPS / Fine Location	Your user location is detected using GPS. This location is then fed through a weather reporting service to detect your local temperature and humidity to make the speed sensor more accurate.
Wake Lock	This enables RCSpeedo to keep the screen on your device on while you are flying.
Read/write external storage	This allows RCSpeedo to read and write logs to your external storage.
